

Do you have multiple sclerosis spasticity?

CONSIDER OUR STUDY TESTING AN ORAL SPRAY FOR SPASTICITY IN PATIENTS WITH MULTIPLE SCLEROSIS.

The **RELEASE MSS3** study is currently enrolling patients who:

- Are at least 18 years old
- Were diagnosed with multiple sclerosis (MS) more than a year ago
- Have tried at least 1 oral antispasticity therapy which was either oral baclofen or oral tizanidine
- Are on a stable optimized dose of oral antispasticity drug(s), but continue to have muscle spasms

If you are eligible and choose to participate in the RELEASE MSS3 study, it will last 4-5 months and will require 7 visits to the research clinic. The study drug, clinic visits, laboratory tests, and study procedures will be provided at no cost. You may also be compensated for your study-related travel expenses.
